## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 7, 8, 12, and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Arai et al. (6,252,384).

Arai et al. disclose a power supply voltage fluctuation inhibiting circuit in Fig. 1. CPU (9) is driven by a Dc power supply and is connected between the sleep and operating states by the value of a stop clock signal applied thereto from a stop clock terminal (91), power fluctuation measuring circuit for measuring fluctuation peaks (121), control circuit (12), internal circuits (6), operational amplifier (8), clock signal control (9) and time-constant terminal (122)

### ***Allowable Subject Matter***

3. Claims 2-6, 9-11 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior art disclose or teach a device for inhibiting fluctuation of power supply voltage with a delay circuit connected to respective internal circuits wherein each delay circuits selects the phase of the respective

clock signal in accordance with a corresponding selection signal and provides the clock signal having the selected phase to the associated internal circuits

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
